Hiring Management Team
Red Hat

To whom it may concern:

I am excited to apply for the Software Engineer position with the Red Hat OpenShift AI (RHOAI) team. With a solid background in Kubernetes, MLOps, and open-source communities, I am eager to contribute to building the next generation of hybrid cloud MLOps platforms. I believe my experience in developing scalable solutions, coupled with my passion for open-source innovation, aligns with Red Hat's mission to accelerate business success using AI.

In my current role at by The Lindemans, LLC, I worked extensively with cloud-native technologies, including Kubernetes and Docker, to design and deploy AI-driven applications. I contributed to the development of backend services using Golang and Python, ensuring non-functional requirements such as security, scalability, and maintainability were met. I also collaborated with cross-functional teams to align product requirements with technical solutions and delivered key features on time, leveraging Agile development methodologies.

At Tolleson Union High School District, I played a key role in implementing cloud solutions, integrating open-source tools, and automating workflows. This experience has prepared me to contribute to the Red Hat OpenShift AI team by building robust MLOps platforms, writing and reviewing code, and participating in open-source communities to drive innovation.

I am particularly excited about the opportunity to join Red Hat because of your leadership in open-source development and your commitment to fostering a culture of continuous learning and innovation. I look forward to the chance to bring my experience with Golang, Kubernetes, and AI development to your team and help drive the next generation of AI-powered hybrid cloud solutions.

Thank you for your time and consideration. I look forward to discussing how my skills and background can contribute to the success of the RHOAI team and the exciting future of AI at Red Hat.

Respectfully,
Enoch Lindeman
