Hiring Management Team
DivIHN

To whom it may concern:

I am writing to express my interest in the Software Test Development Engineer position at DivIHN. With a strong background in automated testing for mobile applications, extensive experience in Java and Swift, and a passion for creating scalable automation solutions, I am excited about the opportunity to contribute to your Verification and Validation (VV) team. I believe my skill set, particularly in automation using XCUITest, Espresso, and Appium, aligns well with the needs of this role.

In my previous role as a Software Development Engineer, I collaborated with SDK development teams to design and implement automated test suites for mobile SDK features. I developed and executed UI automation using Appium and integrated it with APIs for comprehensive test coverage. Additionally, I have a strong track record of utilizing TestRail and Jira to manage test records and defect tracking, ensuring high-quality code delivery through CI/CD processes and robust code reviews.

The opportunity to work on cutting-edge mobile app development and testing environments at DivIHN, especially in the context of medical device testing, greatly excites me. I am confident that my expertise in Java, Swift, and test automation frameworks such as XCUITest and Espresso will enable me to contribute effectively to your team. Furthermore, my familiarity with cloud services like AWS and Google Cloud Platform can help enhance the efficiency of the automated testing infrastructure.

I look forward to the opportunity to discuss how my background and skills can contribute to the continued success of DivIHN. Thank you for considering my application. I am excited about the possibility of joining your team and driving innovation in test automation.

Respectfully,
Enoch Lindeman
