Hiring Management Team
SAIC

To whom it may concern:

I am excited to apply for the Systems Administrator position aboard a US Navy vessel with SAIC. With over three years of experience working in Linux environments, managing virtualized systems, and providing full-spectrum IT support, I am confident in my ability to meet the technical and operational demands of this role. My hands-on experience with system maintenance, patching, network troubleshooting, and my Security+ certification ensure that I am well-prepared to maintain and support the onboard IT and communication systems.

In my current role as a Systems Administrator, I am responsible for managing Linux-based servers, performing system backups, patching systems, and troubleshooting network issues in virtualized environments. I have successfully maintained system uptime and ensured compliance with security protocols while working in high-pressure environments. My ability to work independently and collaboratively with cross-functional teams makes me a reliable team member who can provide technical support for mission-critical operations. I am particularly excited about the opportunity to contribute my skills to SAIC and work directly with Navy crew members aboard the vessel. I am eager to leverage my experience and contribute to the successful operation of onboard IT systems.

Thank you for considering my application. I look forward to discussing how my skills and experiences align with SAIC's mission and the needs of this position.

Respectfully,
Enoch Lindeman
