Hiring Management Team
Atlassian

To whom it may concern:

I am excited to apply for the Infrastructure Engineer position at Atlassian (Loom). With over three years of experience managing cloud infrastructure projects, implementing automation using Go and Terraform, and working extensively with AWS and Kubernetes, I am confident in my ability to contribute to your mission of scaling Loom's infrastructure to meet growing demand.

In my current role as an Infrastructure Engineer, I have designed and deployed distributed systems on AWS, ensuring high availability and performance across cloud services. I have led automation efforts using Go and Terraform, improving system reliability and streamlining deployment processes through CI/CD pipelines. My experience also includes developing observability strategies to monitor system performance, resolve bottlenecks, and enhance the overall developer experience.

I am particularly excited about the opportunity to contribute to Loom's infrastructure initiatives, as I am passionate about building reliable, scalable systems that empower teams to deliver with velocity. I am confident that my expertise in cloud services, automation, and distributed systems will make a meaningful impact on your team.

Thank you for considering my application. I look forward to discussing how my experience aligns with the needs of the infrastructure team at Atlassian.

Respectfully,
Enoch Lindeman
