Hiring Management Team
Stryker

To whom it may concern:

I am writing to express my excitement for the Software Engineer position at Stryker. My extensive experience in developing mission-critical enterprise-grade applications using Java, Spring Boot, and Hibernate aligns closely with your needs for the Edge Server development team. With my solid foundation in cloud-based applications and cross-functional collaboration, I am eager to contribute to Stryker's innovative medical technology solutions.

In my recent role as a Technology Support Specialist at Tolleson Union High School District, I managed large-scale deployments of 3,000 devices and automated support processes, which significantly improved operational efficiency. I also developed a Microsoft Power App, reducing response times by 90% through streamlined workflows. These experiences have honed my skills in solving complex problems, ensuring that solutions meet both technical requirements and user needs.

I am excited about the opportunity to contribute to the Edge Server development team, where my hands-on experience with Java, RESTful APIs, and cloud-native technologies (including AWS and Kubernetes) will directly support Stryker's mission to develop life-changing medical technology. I thrive in Agile environments and am highly skilled at performance tuning and implementing solutions for monitoring and logging system performance.

Stryker's commitment to innovation, collaboration, and patient impact resonates deeply with my personal values. I am eager to bring my skills in enterprise-grade application development, cross-functional collaboration, and process automation to your team, driving projects that improve both system performance and patient outcomes.

Thank you for considering my application. I would welcome the opportunity to further discuss how my skills align with Stryker's mission and contribute to the success of your Edge Server platform.

Respectfully,
Enoch Lindeman
