Hiring Management Team
Penn State University's Applied Research Laboratory

To whom it may concern:

I am excited to apply for the DevSecOps Integration Support Engineer position at Penn State University's Applied Research Laboratory in San Diego. With hands-on experience in node management, remote system administration, security hardening, and automation, I am eager to contribute to the mission of establishing a high-performance Node Management Support team. My background aligns well with your focus on supporting node deployment, maintaining cybersecurity posture, and interfacing directly with customers.

In my current role as an IT Support Specialist, I have managed Linux-based systems, developed Bash and Python scripts for automation, and deployed patches to maintain system compliance and security. I have experience working with containerized environments (Docker/Kubernetes) and managing CI/CD pipelines using Ansible, Puppet, and Terraform. Additionally, I have configured and maintained routers and switches, applying dynamic routing protocols such as OSPF and BGP, which aligns with the networking requirements of this role.

As the Owner and Developer at by The Lindemans, I have implemented secure runtime environments, developed comprehensive documentation, and maintained high availability of systems through automation and proactive management. I am adept at supporting end users through service desk functions and have a strong understanding of DoD security policies, including secure shell protocols, public key encryption, and data encryption best practices.

I am particularly excited about the opportunity at Penn State University's ARL because of its focus on cutting-edge DevSecOps practices and mission-critical projects. My technical skills, commitment to security, and ability to support complex deployments make me an excellent fit for this position. I am eager to contribute to your team's success by ensuring reliable node management and maintaining a strong security posture.

I would welcome the opportunity to discuss how my experience aligns with the DevSecOps Integration Support Engineer position at Penn State University's ARL. Thank you for considering my application. I look forward to the possibility of contributing to your team's mission.

Respectfully, Enoch Lindeman
