Hiring Management Team
Prometheum

To whom it may concern:

I am excited to apply for the Fullstack Engineer role at Prometheum. With over seven years of experience in software development and a passion for working in fintech, I am eager to contribute to your innovative technology stack. The opportunity to build and integrate custody, compliance, and operations systems within your NodeJS-based architecture aligns with my expertise in backend and frontend development and my interest in blockchain and digital asset technologies.

At by The Lindemans, LLC, I worked extensively with NodeJS and TypeScript to develop scalable APIs and microservices-based architectures. My experience designing and maintaining RESTful APIs, along with my understanding of GraphQL, prepared me to build efficient, reliable backend solutions. I collaborated closely with internal and external stakeholders to integrate systems and streamline operations, skills that will allow me to contribute effectively to your post-trade settlement systems.

In my role at Tolleson Union High School District, I developed and maintained frontend components using ReactJS, HTML, CSS, and JavaScript. I ensured cross-browser compatibility and implemented responsive designs that enhanced the user experience. I also worked within Agile teams, using tools like Jira and Confluence to manage sprints and track progress. My ability to deliver clean, well-tested code and document my work thoroughly will allow me to integrate seamlessly into your team at Prometheum.

I am particularly drawn to Prometheum's focus on solving complex fintech challenges through blockchain integration and cutting-edge technology. I look forward to applying my skills in NodeJS, TypeScript, and microservices to help build innovative solutions that drive your mission forward.

Thank you for your time and consideration. I would welcome the opportunity to discuss how my background and skills align with Prometheum's goals.

Respectfully,
Enoch Lindeman
