ReadMe

To whom it may concern:

I am excited to apply for the Backend Engineer position at ReadMe. With extensive experience in backend development, Git-based workflows, and collaborative engineering environments, I am eager to contribute to your mission of building exceptional developer hubs. ReadMe's focus on creative problem solving and mentorship aligns perfectly with my passion for delivering innovative, high-quality software solutions.

At by The Lindemans, LLC, I designed and implemented scalable backend systems using JavaScript, Python, and REST APIs. I worked closely with product and design teams to transform ideas into features, ensuring technical feasibility and delivering code that met business goals. My experience with Git-based version control workflows allowed me to contribute to code repositories seamlessly, keeping all changes synchronized across multiple team members—skills that align well with ReadMe's efforts around bi-directional sync and branching.

In my role as a Technology Support Specialist at Tolleson Union High School District, I developed backend services and troubleshooting processes to ensure uptime and smooth operations. I actively participated in code reviews, pair programming, and mentoring sessions, building a collaborative environment where team members could share knowledge and grow together. These experiences reflect ReadMe's values of knowledge sharing, mentorship, and collaborative growth.

I am particularly drawn to ReadMe's product-focused engineering approach and exciting initiatives, such as Owlbot AI and bi-directional sync, which offer opportunities to make a tangible impact. I look forward to contributing my skills in backend development, Git workflows, and creative problem-solving while continuing to learn and grow in your dynamic environment.

Thank you for your time and consideration. I would love the opportunity to further discuss how my background in backend development and team collaboration aligns with the goals of ReadMe.

Respectfully,
Enoch Lindeman
